

Amana Woods July 4, 2015

Amanita bisporigera – Destroying Angel or Death Cup

Amanita fulva – Tawny Grisette; brown version of *Amanita vaginata*

Boletus fraternus grp. – small red cap, yellow pores bruise blue

Boletus cf. pulverulentus – dark brown cap, stipe with longitudinal ridges, context immediately bruises/stains deep blue, cut base of stipe exhibits flash of red then bluing; my record for Ryerson Woods August 3, 2013 describes *Boletus griseus* as “cut stem flashes red then stains blue” – this is a mistake as this bolete does not stain blue !!!

Ceratiomyxa fruticulosa – Coral Slime Mold

Cerrena unicolor

Coltrichia cinnamomea – Fairy Stool

Coprinus radians – Inky Cap fruiting from orange mycelial mat (ozonium)

Coprinus quadrifidus – Shingle Cap Inky

Cordyceps variabilis – parasitic on fly larvae in mossy log

Cortinarius cinnamomeus – Orange Cort

Cortinarius distans – nondescript brown Cort with distant gills

Cortinarius sp. – purple colors

Crepidotus crocophyllus

Crucibulum leae – Bongo Drum Bird’s Nest Fungus

Daldinia concentrica – Cramp Balls or King Alfred’s Cakes

Ductifera pululahuana – White Jelly (named for site in Ecuador); formerly *Exidia alba*

Eocronartium muscicola – white filamentous parasite on moss

Fomitopsis spraguei – spongy white polypore, margin slowly bruises blue-green

Fuligo septica – Dog Vomit Slime Mold

Galiella rufa – Rubber Cup

Geastrum sp. – immature earthstar

Gymnopilus sp.

Gyroporus castaneus – Chestnut Bolete

Hemitrichia calyculata – Stalked Cup Slime Mold; formerly *Hemitrichia stipitata*

Hemitrichia serpula – Pretzel Slime Mold

Hydnellum spongiosipes

Hypomyces chrysospermus – Bolete Mold

Inocybe sp. – Fiber Head

Isaria sp. – little red antlers with white tips, broken at base so insect host was not evident; anamorph (asexual state) of *Cordyceps*

Laccaria ochropurpurea – Silvery Purple *Laccaria*

Laccaria cf. laccata

Lactarius serifluus – Orange *Lactarius* with hairy base

Lycoperdon perlatum – Gem-studded Puffball

Marasmiellus nigripes

Marasmius capillaris

Marasmius rotula

Marasmius siccus

Microstoma floccosum – Fairy Goblets
Mycena sp.
Perenniporia ohiensis – Fencepost Polypore on decorticate wood
Peziza spp. -----
Phellinus gilvus – Tiger Eye Polypore
Phlebia incarnata
Pleurotus ostreatus – Oyster Mushroom
Pluteus admirabilis – Yellow Pluteus
Pluteus aurantiorugosus – pileus bright red, gills free pinkish, spores oval 7X4.5 um, cystidia without projections (horns); ID confirmed by Roger Heidt
Pluteus cervinus – Deer Mushroom
Pholiota sp.
Polyporus alveolaris – Hickory Stick Polypore (orange with hexagonal spores)
Polyporus umbellatus – Many-capped Hen-of-the-Woods; formerly *Grifola umbellata*
Ramaria stricta grp. – upright branches, tips pointed not crown-like, on wood
Rhodotus palmatus – Pink Net Cap
Russula aeruginea – Green *Russula*
Russula albonigra – Blackening *Russula*
Russula laurocerasi – Fetid *Russula*; representative of the *Russula fragrantissima* group
Russula spp.
Sarcoscypha occidentalis – Little Red Cup
Schizophyllum commune – Split Gill
Sebacina incrustans – encrusting stems and leaves; not *Tremella concrescens* which is gelatinous; both are pictured in Bessette's Mushrooms of Northeastern North America 436
Scleroderma areolatum – Scaly Earthball
Scutellinia -----
Stereum complicatum – Orange Log Leaves
Stereum ostrea – False Turkey Tail or Common Log Leaves
Strobilomyces floccopus – Old Man of the Woods (shaggy bolete)
Trametes conchifer – Bird's Nest Polypore
Tremellodendron pallidum – False Coral Jelly
Trichaptum biforme – Purple Tooth
Tricholomopsis platyphylla – Spring Mop or Plateful Trich; resembles *Pluteus* but white gills attached
Tylopilus rubrobrunneus – bitter bolete, pinkish pores bruise brown, stem reticulate only at apex; Guide to Kansas Mushrooms 168
Xeromphalina kauffmanii – Kauffman's Stump Cluster Mushrooms
Xerula megalospora – Rooting Collybia with smooth stipe; now renamed *Hymenopellis megalospora*
Xylaria spp.
